EDUCATION

Brandeis University - B.S. in Computer Science & B.A. in Biology [GPA: 3.96]

May 2029

Relevant Coursework - Advanced Programming Techniques in Java, Data Structures & Algorithms, Linear Algebra

Honors - Posse Foundation Full-Tuition Leadership Scholarship 2029, Dean's List Student, 3x Hackathon Winner

EXPERIENCE

Break Through Tech AI | *Cornell Tech AI/ML Fellow* | New York, NY

May 2026 - Present

- Secured a 1-year AI/ML Fellowship by competing in a highly selective pool of **4,400+** applicants to master industry-level predictive modeling, data engineering, and machine learning pipelines through a technical curriculum and applied AI projects

Branda App | *Event Coordinator & Android Developer* | Waltham, MA

Feb 2026 - Present

- Expanding user accessibility to **10,000+** daily active students by building the platform's first Android migration, translating legacy iOS **Swift** architecture into **Kotlin** equivalents, and working with **AI code-analysis agents** to map object-oriented design patterns and ensure feature parity in a 5-engineer team
- Drove **25+ unique feature submissions** by directing a campus-wide Designathon, managing recruitment channels, and directly feeding student feedback into the product engineering roadmap

Kadener Lab | *Computational Biology Undergraduate Researcher* | Waltham, MA

Oct 2025 - Present

- Optimized local data processing for **>200GB** spatial transcriptomics datasets by engineering iterative processing scripts in **Python** and **Pandas**, successfully mitigating RAM overloads and local system crashes
- Isolated and filtered **16,000+** unique gene expression patterns to extract relevant circadian rhythm metadata, systematically stripping out unaligned data points to streamline downstream laboratory analysis
- Generated **spatial distribution maps** by programmatically plotting filtered genetic markers directly onto Drosophila brain histology slices, allowing researchers to visually audit tissue-specific expression boundaries

PROJECTS

BioTrial Auditor | *Lovable Buildathon 2026* (1st place)

<https://olusheki.github.io/biotrial>

- Won 1st Place** by mitigating AI hallucinations in clinical trial auditing, designing a 21 CFR Part 11-compliant SaaS product concept, and a "traceability path" that automates regulatory cross-referencing for researchers
- Developed a secure dashboard featuring an **asynchronous SHA-256 data-hashing** framework to establish automated, immutable audit trails, proving a theoretical **42%** reduction in manual regulatory cross-referencing for researchers

Probabilistic NCAA Forecasting Ensemble | *Datathon 2026* (2nd place)

<https://github.com/olusheki/datathon2026>

- Secured **2nd Place (\$500 prize)** as the **sole undergraduate finalist** among **46** graduate-level analytics teams, navigating a top-8 cut while achieving a 0.188 Mean Brier Score and predicting **3 of 4** Final Four teams
- Mitigated algorithmic overconfidence in sports forecasting by engineering a 4-model predictive ensemble (**LightGBM**, **CatBoost**) utilizing **48 custom differential features** and strict GroupKFold cross-validation using **Python**

aVow | *Creator & Android Developer*

- Architected a nuclear-option **productivity app** in Kotlin designed to hard-enforce digital boundaries through "binding vows" by leveraging Android Device Administration API policies and OS-level restrictions
- Built a real-time, non-blocking URL sniffer by optimizing an Android AccessibilityService with asynchronous **Kotlin Coroutines and Flows** to instantly parse browser node trees without triggering main-thread ANR crashes
- Designed a seamless, real-time blocking overlay** that pairs a clean, minimalist monospace user interface with an instant background scanner to intercept targeted distractions the microsecond they are opened
- Implemented a **Test-Driven Development (TDD)** workflow, generating an automated test suite to validate OS-level package blocking, system layer stability, and strict behavioral requirements before deploying code.

SKILLS

Languages: Java, Python, Kotlin, Typescript

Tools & Platforms: React, NumPy, Pandas, Seaborn, Tailwind CSS

Tools & Concepts: GitHub, Houdini, Napari, Android Studio

Interests: Visual Art, Design, Sewing, Guitar, Running
